# Preamble

---

This project was written by group 2, for the third semester on the IT-electronics education at university college Nordjylland, Sofiendalsvej 60. The project goal is to make a line following robot.

	<b>Bibliography</b>	<b>17</b>

3D print	3-Dimensional printing
ADC	Analog-digital conversion
GUI	Graphical User Interface
IDE	Integrated Development Environment
MCU	Microcontroller Unit
PCB	Printed Circuit Board
PID	Proportional-integral-derivative
PWM	Pulse-width modulation
THT	Through-hole-technology
UART	Universal Asynchronous Receiver/Transmitter

# Introduction 1

---

Indledning til afsnittet af analyse

## 2.1 Problem statement

The problem presented to the group is how to make a robot move from point A to point B, with the help of different sensors, including ultrasound and infrared, and to make use of autonomous algorithms to avoid obstacles.

Problem statement:

- Bot should be able to move from A to B
- Should be able to stop at a predetermined point
- Manoeuvre around obstacles

## 2.2 Problem analysis

### 2.2.1 Mobility from A to B

The robot receives a coordinate to reach, and will use its own starting point to determine a direction to drive towards the given coordinate. The robot will need a way to control its movement and direct current to function optimal.

The robot needs a way to effectively regulate speed and also steer itself autonomously. To dictate how quickly the robot moves, the robot will need some system that allows it to move around on a flat surface, the robot needs to be able to move around from point A to point B. .

### 2.2.2 Predetermined end point

### 2.2.3 Obstacles avoidance

# Requirements specification 3

---

Beskriv section [1]

- The robot needs line following capabilities
- The robot needs object avoidance
- The robot should make use of an H-bridge
- The robot should make use of Motors
- The robot needs a way to implement motor control
- The robot should make use of a micro-controller unit
- The robot should make use of the Magician chassis

# Hardware section 4

---

Beskrivelse af afsnit

## 4.1 Hardware diagram

Beskrivelse af hardware diagram

### 4.1.1 Sensor choice

### 4.1.2 Another sensor choice?

## 4.2 Analog-to-digital converter

ADC diagram

This products usage of ADC

## 4.3 The chipKIT Uno32 board

## 4.4 The motor shield - PKA03

### 4.4.1 The H bridge

## 4.5 The Bluetooth transceiver

# Software section 5

---

Beskriv Software section

## 5.0.1 Software diagram

## 5.1 Analog to digital conversion

## 5.2 PID controller

### 5.2.1 Proportional control(P)

### 5.2.2 Integral control(I)

### 5.2.3 Derivative control(D)

### 5.2.4 Loop tuning

### 5.2.5 Steady-state error

### 5.2.6 Stability

Table manual explained

### 5.2.7 PID Implementation

## 5.3 Pulse-width modulation

### 5.3.1 Duty cycles

## 5.4 The interface

# Test 6

---

Beskriv test section

## 6.1 Unit Testing

### 6.1.1 Sensor

Setup

Results

### 6.1.2 DC Motors
